## 1 Links

- <http://plantuml.sourceforge.net/>
- my local copy of the language reference

## 2 Information on the local installation

```
echo "Emacs variable org-plantuml-jar-path:$jpath\n\n"  
if test ! -r "$jpath"; then  
    echo "ERROR: Cannot read the file"
```

```

    return
fi
java -jar "$jpath" -version
echo
java -jar "$jpath" -checkversion

```

## 2.1 Help text

```
java -jar "$jpath" -help
```

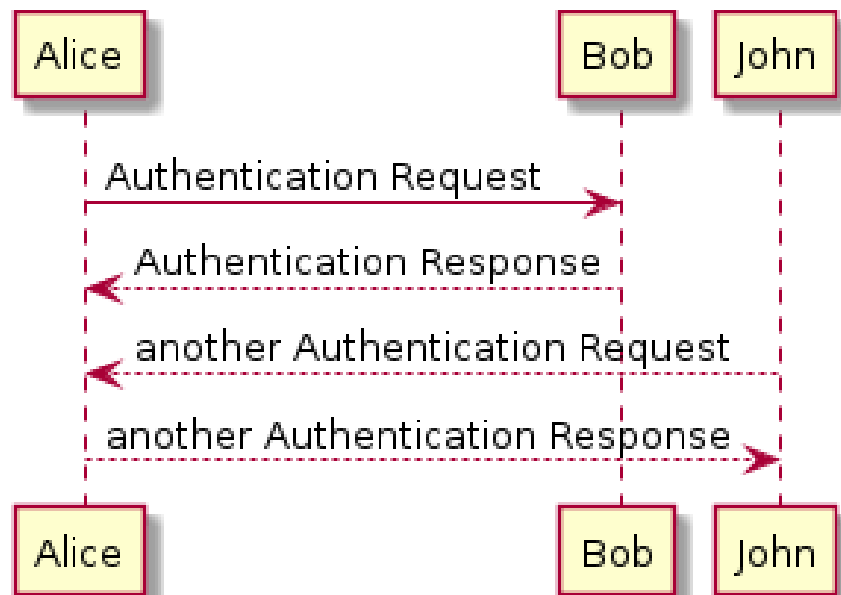

## 3 Tests

### 3.1 simple test

```

' this is a comment
Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response
John --> Alice: another Authentication Request
Alice --> John: another Authentication Response

```

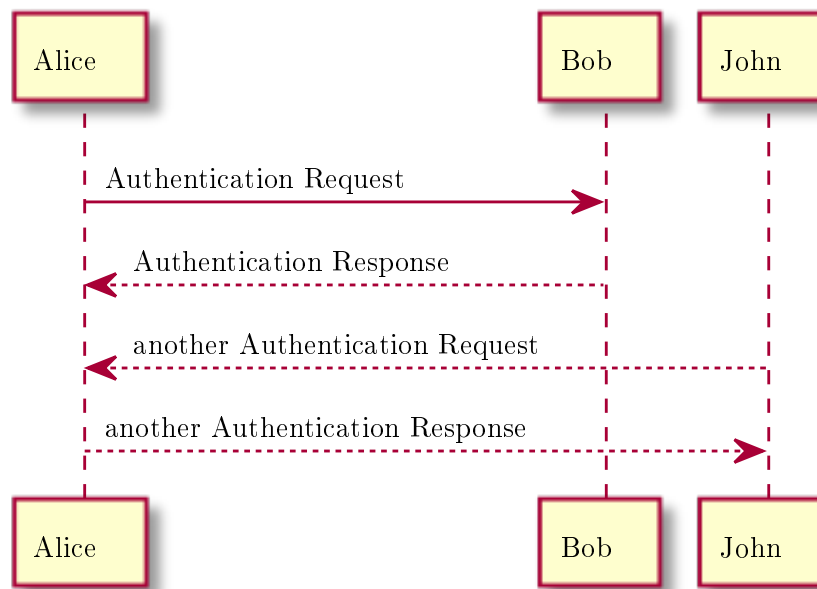

### 3.2 simple test with SVG graphic

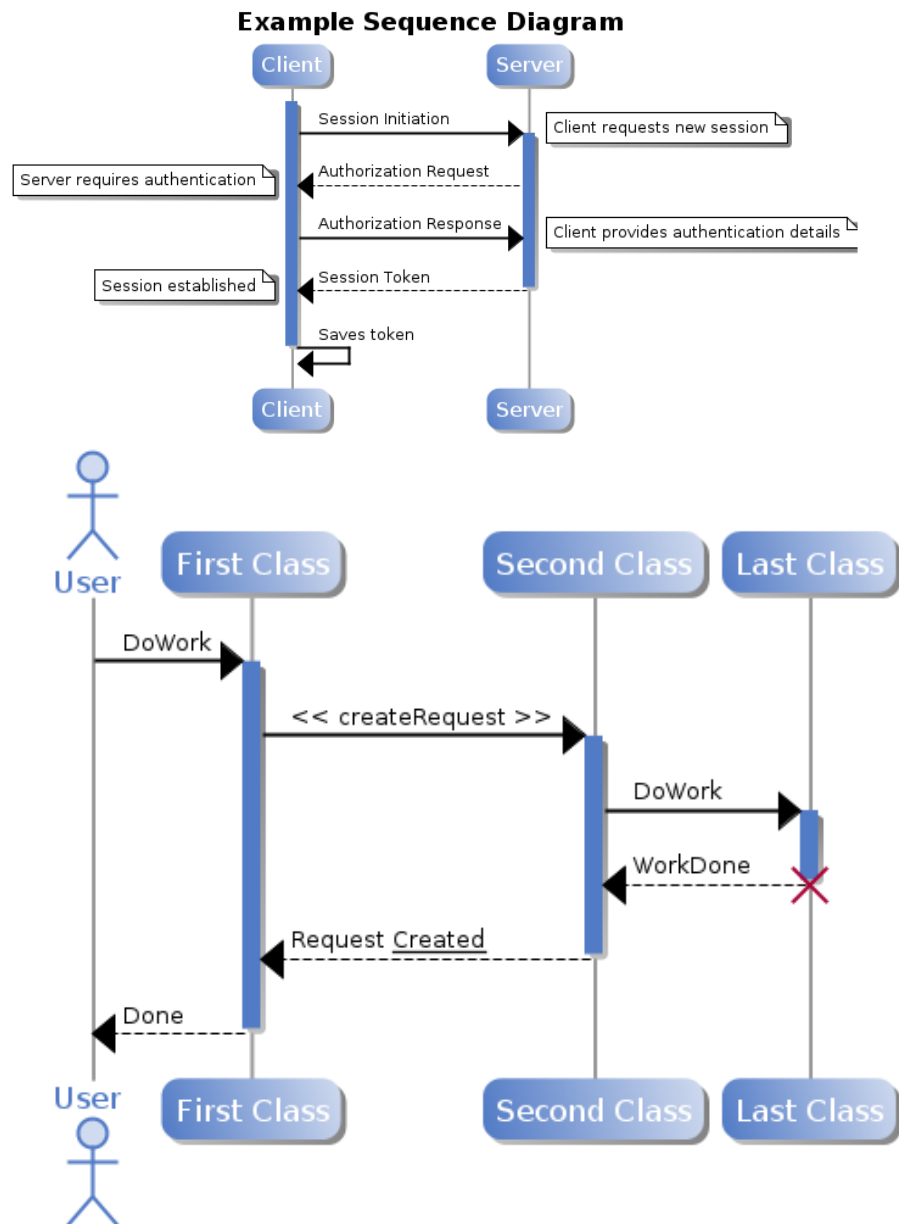

The *svg* package uses inkscape to separate the text and graphical elements of the SVG into a Tex file (\*.pdf<sub>tex</sub>) and a PDF file containing the graph elements. E.g. *svg-sequence1.svg* into *svg-sequence1.pdf<sub>tex</sub>* and *svg-sequence1.pdf*.

Currently, SVG pictures can only be rendered correctly, **if the picture is in the same directory** as the tex (and therefore also org q) source file.

```
' this is a comment
Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response
John --> Alice: another Authentication Request
Alice --> John: another Authentication Response
```

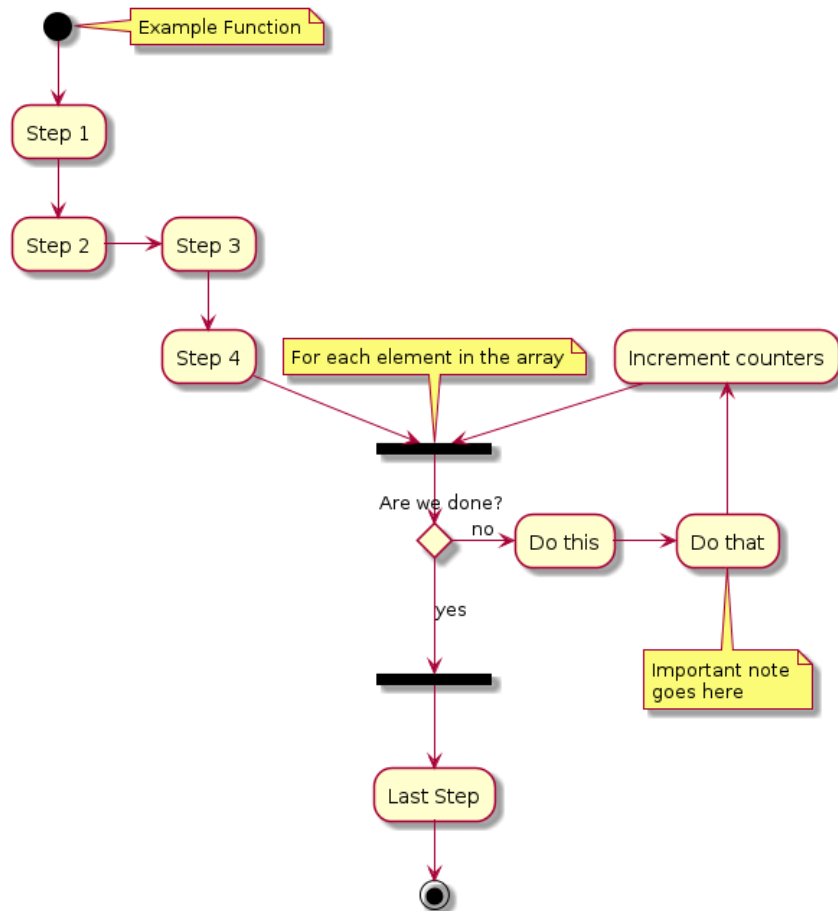

### 3.3 sequence diagrams

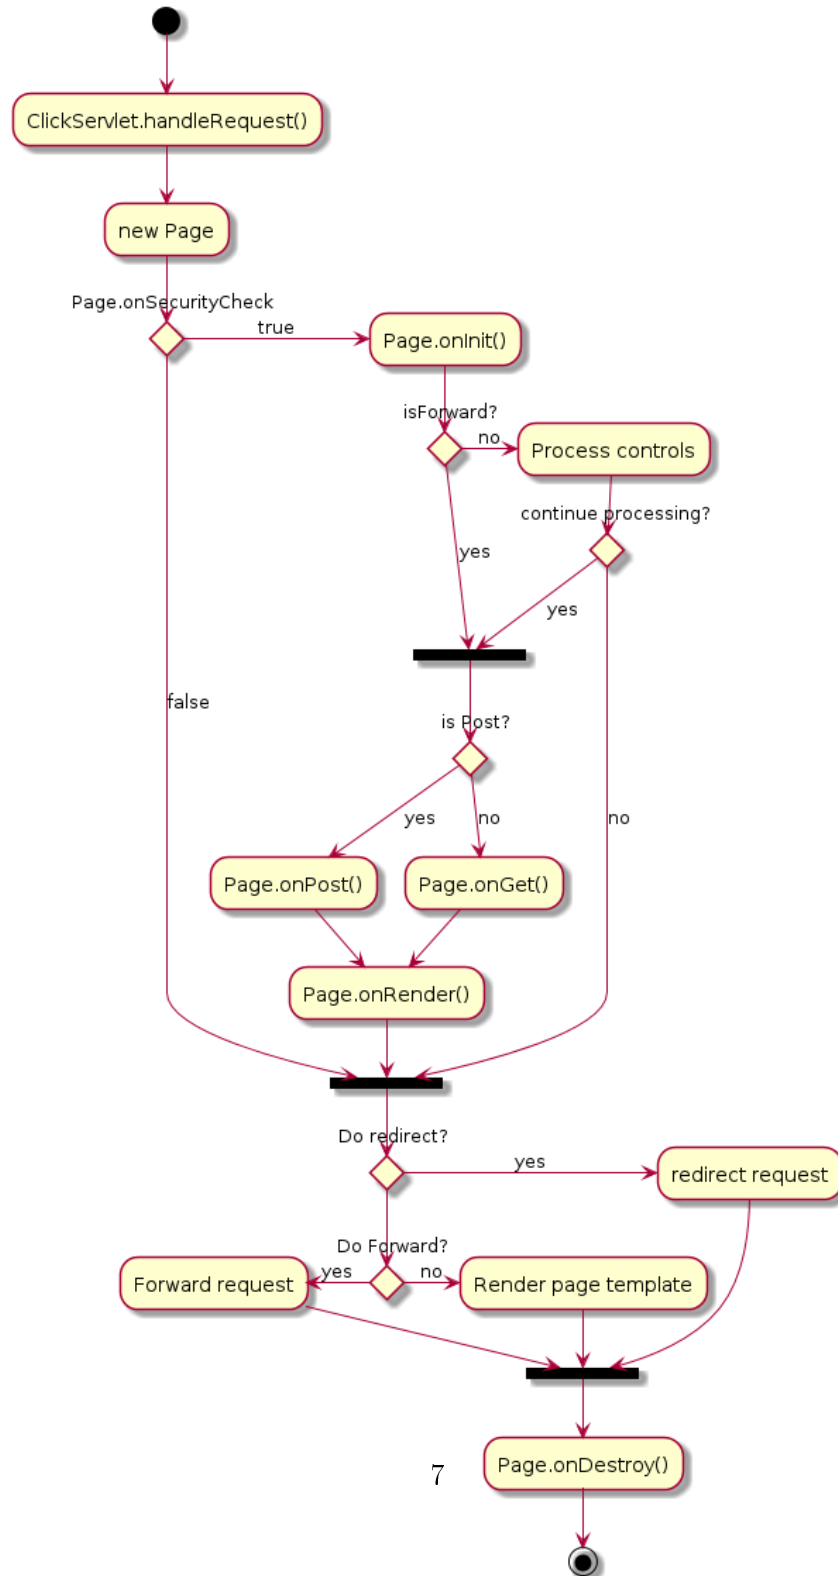

### 3.4 old style activity diagrams

Example Activity Diagram

## Servlet Container

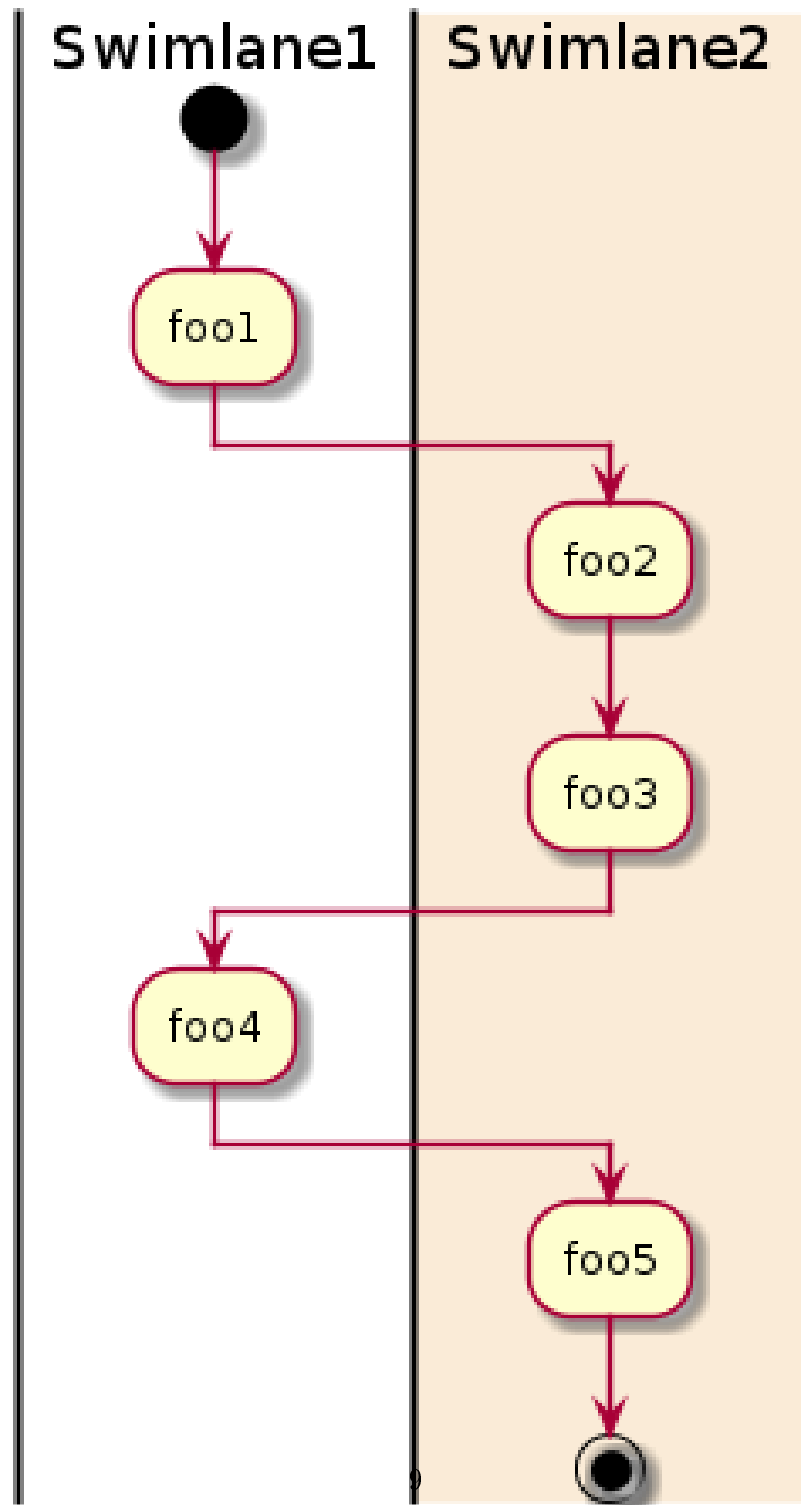

## **3.5 new style activity diagrams**

- <http://plantuml.sourceforge.net/activity2.html>

### **3.5.1 swimlanes**

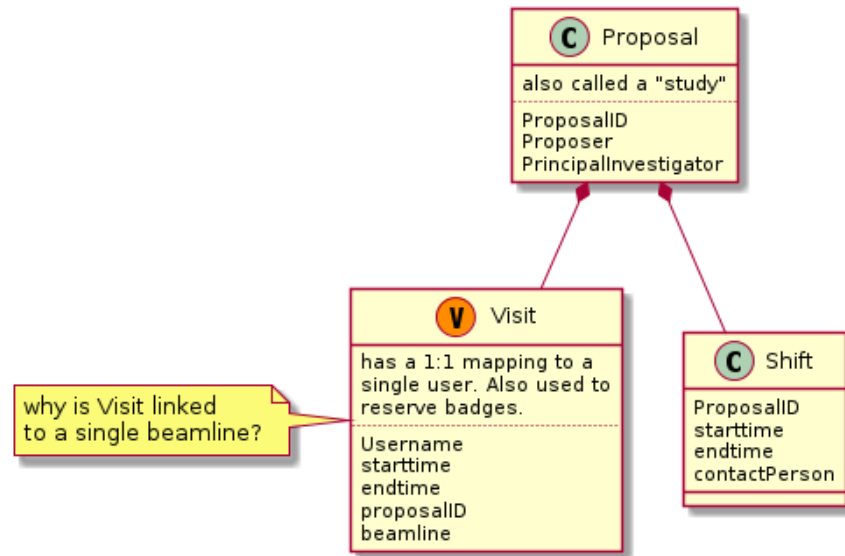

Swimlanes actually are activity diagrams using the new syntax.

### 3.6 Class diagram

<http://plantuml.sourceforge.net/classes.html>

## 4 TODO

- example for scaling `scale 800*600`
